

## TEST TASK \ JUNIOR PYTHON DEVELOPER

Object of this task is to create a simple REST API. You have to use Django and Django rest framework.

### SOCIAL NETWORK

#### Basic models:

- User
- Post (always made by a user)

#### Basic features:

- user signup
- user login
- post creation
- post like
- post unlike

For User and Post objects, candidate is free to define attributes as they see fit.

#### Requirements:

- Token authentication (JWT is preferred)
- use Django with any other Django batteries, databases etc.

#### Optional (will be a plus):

- use [clearbit.com/enrichment](https://clearbit.com/enrichment) for getting additional data for the user on signup
- use [emailhunter.co](https://emailhunter.co) for verifying email existence on signup

### Tests

*\* For every API endpoint you have to write unit tests using Django Tests.*
